

# 7th Grade Integrated Science - NGSS

## From Molecules to Organisms: Structures and Processes MS-LS1

- 1 Construct a scientific explanation based on evidence for the role of photosynthesis in the cycling of matter and flow of energy into and out of organisms. MS-LS1-6
- 2 Develop a model to describe how food is rearranged through chemical reactions forming new molecules that support growth and/or release energy as this matter moves through an organism. MS-LS1-7

## Ecosystems: Interactions, Energy, and Dynamics MS-LS2

- 1 Analyze and interpret data to provide evidence for the effects of resource availability on organisms and populations of organisms in an ecosystem. MS-LS2-1
- 2 Construct an explanation that predicts patterns of interactions among organisms across multiple ecosystems. MS-LS2-2
- 3 Develop a model to describe the cycling of matter and flow of energy among living and nonliving parts of an ecosystem. MS-LS2-3
- 4 Construct an argument supported by empirical evidence that changes to physical or biological components of an ecosystem affect populations. MS-LS2-4
- 5 Evaluate competing design solutions for maintaining biodiversity and ecosystem services.\* MS-LS2-5

## Earth's Systems MS-ESS2

- 1 Develop a model to describe the cycling of Earth's materials and the flow of energy that drives this process. MS-ESS2-1
- 2 Construct an explanation based on evidence for how geoscience processes have changed Earth's surface at varying time and spatial scales. MS-ESS2-2
- 3 Analyze and interpret data on the distribution of fossils and rocks, continental shapes, and seafloor structures to provide evidence of the past plate motions. MS-ESS2-3

## Earth and Human Activity MS-ESS3

- 1 Construct a scientific explanation based on evidence for how the uneven distributions of Earth's mineral, energy, and groundwater resources are the result of past and current geoscience processes. MS-ESS3-1

---

**2 Analyze and interpret data on natural hazards to forecast future catastrophic events and inform the development of technologies to mitigate their effects.** MS-ESS3-2

---

**Matter and Its Interactions** MS-PS1

**1 Develop models to describe the atomic composition of simple molecules and extended structures.** MS-PS1-1

---

**2 Analyze and interpret data on the properties of substances before and after the substances interact to determine if a chemical reaction has occurred.** MS-PS1-2

---

**3 Gather and make sense of information to describe that synthetic materials come from natural resources and impact society.** MS-PS1-3

---

**4 Develop a model that predicts and describes changes in particle motion, temperature, and state of a pure substance when thermal energy is added or removed.** MS-PS1-4

---

**5 Develop and use a model to describe how the total number of atoms does not change in a chemical reaction and thus mass is conserved.** MS-PS1-5

---

**6 Undertake a design project to construct, test, and modify a device that either releases or absorbs thermal energy by chemical processes.\*** MS-PS1-6

---

**Engineering Design** MS-ETS1

**1 Define the criteria and constraints of a design problem with sufficient precision to ensure a successful solution, taking into account relevant scientific principles and potential impacts on people and the natural environment that may limit possible solutions.** MS-ETS1-1

---

**2 Evaluate competing design solutions using a systematic process to determine how well they meet the criteria and constraints of the problem.** MS-ETS1-2

---

**3 Analyze data from tests to determine similarities and differences among several design solutions to identify the best characteristics of each that can be combined into a new solution to better meet the criteria for success.** MS-ETS1-3

---

**4 Develop a model to generate data for iterative testing and modification of a proposed object, tool, or process such that an optimal design can be achieved.** MS-ETS1-4
